                                                                                                                                                                                                                                                                                                                                                                                                                                 /note-"vector: PWD42nv; Purified genomic DNA from M.
musculus C57BL/6J (male) was obtained from the Jackson
Laboratory Mouse DNA Resource
(http://www.jax.org/resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polynucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis. Vector DNA was prepared from a derivative
of pWD42 (gil4732114)gb]AF129072-1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
                                                                                                                                                                                                                                                                                                                          purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance. 99 c 96 g 163 t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Biomedical Polymers Research Bldg.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /organism="Mus musculus"

                                                                                                /note-*Organ: Kidney/Brain; Vector: pBACe3.6; Site_1: EcoRI; Site_2: EcoRI; Female C57BL/GJ mouse kidney and/or brain genomic DNA was isolated and partially digested with a combination of EcoRI and EcoRI Methylase. Size selected DNA was cloned into the pBACe3.6 vector at the EcoRI sites. The ligation products were transformed into DH10B electrocompetent cells (BRL Life Technologies).

                                                                                                                                    was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWNA2 (gi4732114)gblAF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coil XII0-Gold (Stratagene) cells and selected for ampicillin resistance."

The sequence contained an oligo-dT track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand cDNA and therefore this may represent a bonafide poly A
tail. The sequence tag present in the cDNA between the NotI site
and the ollgo-dT track served to verify it as a clone from the
normalized embryo at 13 dpc library cDNA Library Preparation: M.B.
Soares Lab Clone distribution: clones will be available through
                                                       pig.

The tuber was peeled, well away from the surface. Then it was chopped into 1-2 mm cubes and immediately frozen in liquid nitrogen. This library is noted as P4 in Tanksley lab notebooks."

by Matthew Clark (Lehrach lab; ICRF, London and Max Planck Institut fuer Molekulare Genetik, Berlin). cDNAs for EST analysis were selected following oligonucleotide hybridization fingerprinting of arrayed clones from zebrafish late somitogenesis (26 ss), adult liver or embryonic shield stage (5.6 h) libraries. Fingerprint data were used to computationally cluster cDNAs, and single cDNA from each cluster was chosen for sequencing. In some cases multiple members of the same cluster were sequenced to assess clustering parameters or single clones
                                                                                                                                                                                                                sites of the pSPORT1 vector (BRL). The present invention describes human and mouse spastin, and mutated CC human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay CK (ARSACS)) gene sequences (I). The spastin gene has been mapped to CK chromosome 13q11. (I) have neuroprotective activities and can be used in CK gene therapy and as a spastin polypeptide agonists. (I), their fragments CK or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for diagnosing or aiding in the CK diagnosis of an early onset neurodegenerative disease in an individual. CK reduced motor nerve velocity, hypermyelination of retinal nerve fibres, CK atrophy of upper cerebellar vermis, absence of Purkinje cells and CK abnormal neuronal lipid storage. (I) can also be used to produce cantisense nucleic acids, is useful as molecular weight or chromosome CK markers, to identify genetic disorders, as hybridisation probes or primers, as an antigen, identify and express recombinant protein for CK analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from CK the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression or activity of (I). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with spastin CK is derived from the human spastin nucleotide sequence (AAH20174) as stated on page 14.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                          The present invention describes human and mouse spastin, and mutated CC human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay CC (ARSACS)) gene sequences (I). The spastin gene has been mapped to CC chromosome 13q11. (I) have neuroprotective activities and can be used in CC gene therapy and as a spastin polypeptide agonists. (I), their fragments CC or their complements can be useful for assaying the presence of a nucleic cacid molecule in a sample. (I) is useful for diagnosing or aiding in the CC diagnosis of an early onset neurodegenerative disease in an individual. CC The neurodegenerative disease comprises reduced sensory nerve conduction, creduced motor nerve velocity, hypermyelination of retinal nerve fibres, CC atrophy of upper cerebellar vermis, absence of purkinje cells and CC abnormal neuronal lipid storage. (I) can also be used to produce cantisense nucleic acids, is useful as molecular weight or chromosome CC markers, to identify genetic disorders, as hybridisation probes or CC analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from CC in which the corresponding protein is expressed. Diagnostic methods from CC protein or spastin gene expression or activity. The present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression CC constitution or spastin gene expression or activity. The present sequence expression or activity. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated polynucleotide, encoding spastin gene, and polypeptides, useful for diagnosing autosomal recessive spastic ataxia of Charlevoix-Saguenay disease by detecting two point mutations in spast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        reduced motor nerve velocity; hypermyelination of retinal nerve atrophy of upper cerebellar vermis; absence of Purkinje cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    autosomal recessive

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δ
The present invention describes human and mouse spastin, and mutated human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay (ARSACS)) gene sequences (I). The spastin gene has been mapped to chromosome 13q11. (I) have neuroprotective activities and can be used in gene therapy and as a spastin polypeptide agonists. (I), their fragments or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for diagnosing or aiding in the diagnosis of an early onset neurodegenerative disease in an individual. The neurodegenerative disease conduction,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; mouse; spastin; ARSACS; chromosome 13q11; identification; autosomal recessive spastic ataxia of Charlevoix-Saguenay; mutation; neurodegenerative disease; reduced sensory nerve conduction; diagnost reduced motor nerve velocity; hypermyelination of retinal nerve fibre atrophy of upper cerebellar vermis; absence of Purkinje cell; abnormal neuronal lipid storage; genetic disorder; characterisation;
                                                                                                                                                                                                                                                                                Claim
                                                                                                                                                                                                                                                                                                                                                       New isolated polynucleotide, encoding spastin gene, and polypeptides, useful for diagnosing autosomal recessive spastic ataxia of Charlevoix Saguenay disease by detecting two point mutations in spast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (UYMC-)

New isolated polynucleotide, encoding spastin gene, and polypep useful for diagnosing autosomal recessive spastic ataxia of Charlevoix-Saguenay disease by detecting two point mutations in sequence polypeptides, spastin

Claim 1; Page -; 76pp; English

The present invention describes human and mouse spastin, and mutated CC human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay CC (ARSACS)) gene sequences (I). The spastin gene has been mapped to CC chromosome 13q11. (I) have neuroprotective activities and can be used in CC gene therapy and as a spastin polypeptide agonists. (I), their fragments CC or their complements can be useful for assaying the presence of a nucleic CC acid molecule in a sample. (I) is useful for assaying the presence of a nucleic CC diagnosis of an early onset neurodegenerative disease in an individual. CC The neurodegenerative disease comprises reduced sensory nerve conduction, CC reduced motor nerve velocity, hypermyelination of retinal nerve fibres, at the neurodegenerative disease. (I) can also be used to produce CC antisense nucleic acids, is useful as molecular weight or chromosome CC analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from CC the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression correctivity of (I). The assays can be utilised to identify a subject having or at risk of developing a disease or activity. The present sequence protein or spastin gene expression or activity. The present sequence encodes a mutated human spastin.

N.B. The present sequence is not given in the present specification is derived from the human spastin nucleotide sequence (AAH20174) as stated on but

The present invention describes human and mouse spastin, and mutated CC (ARSACS)) gene sequences (I). The spastin gene has been mapped to CC chromosome 13q11. (I) have neuroprotective activities and can be used in GC acid molecule in a sample. (I) is useful for assaying the presence of a nucleic CC acid molecule in a sample. (I) is useful for diagnosing or aiding in the CC diagnosis of an early onset neuropedepenerative disease in an individual. CC reduced motor nerve velocity, hypermyelination of retinal nerve fibres, CC atrophy of upper cerebellar vermis, absence of Purkinje cells and CC abnormal neuronal lipid storage. (I) can also be used to produce markers, to identify genetic disorders, as hybridisation probes or CC analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression or activity of (I). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin CC encodes a mutated human spastin nucleotide sequence (AAH20174) as derived from the human spastin nucleotide sequence (AAH20174) as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           reduced

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          В
The present invention describes human and mouse spastin, and mutated human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay (ARSACS)) gene sequences (I). The spastin gene has been mapped to chromosome 13q11. (I) have neuroprotective activities and can be used in gene therapy and as a spastin polypeptide agonists. (I), their fragments or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for diagnosing or aiding in the diagnosis of an early onset neurodegenerative disease in an individual. The neurodegenerative disease comprises reduced sensory nerve conduction, reduced motor nerve velocity, hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of purking cells and abnormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome markers, to identify genetic disorders, as hybridisation probes or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; mouse; spastin; ARSACS; chromosome 13q11; identification; autosomal recessive spastic ataxia of Charlevoix-Saguenay; mutation; neurodegenerative disease; reduced sensory nerve conduction; diagnosi reduced motor nerve velocity; hypermyelination of retinal nerve fibre atrophy of upper cerebellar vermis; absence of Purkinje cell; abnormal neuronal lipid storage; genetic disorder; characterisation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated polynucleotide, encoding spastin gene, and polypeptides, useful for diagnosing autosomal recessive spastic ataxia of Charlevoix-Saguenay disease by detecting two point mutations in spast gene sequence -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (UYMC-)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             đ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
        The present invention describes human and mouse spastin, and mutated human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay (ARSACS)) gene sequences (I). The spastin gene has been mapped to chromosome 13q11. (I) have neuroprotective activities and can be used in gene therapy and as a spastin polypeptide agonists. (I), their fragments or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for diagnosing or aiding in the blagmosis of an acris contact.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; mouse; spastin; ARSACS; chromosome 13q11; identification; autosomal recessive spastic ataxia of Charlevoix-Saquenay; mutation; neurodegenerative disease; reduced sensory nerve conduction; diagnos reduced motor nerve velocity; hypermyelination of retinal nerve fibratrophy of upper cerebellar vermis; absence of Purkinje cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    primers, as an antigen, identify and express recombinant protein analysis, characterisation or therapeutic use, or as markers for in which the corresponding protein is expressed. Diagnostic methothe present invention can be used to identify subjects having or of developing a disease or disorder associated with aberrant expressions.
                                                                                                                                               Claim
                                                                                                                                                                                         New isolated polynucleotide, encoding spastin gene, and puseful for diagnosing autosomal recessive spastic ataxia Charlevoix-Saguenay disease by detecting two point mutat.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          5521 tacaacaaccagccatttacagaagatgatgttagaggaattcagaatcttgg 5573

Diagnostic methods from e present invention can be used to identify subjects having or at risk developing a disease or disorder associated with aberrant expression activity of (I). The assays can be utilised to identify a subject ving or at risk of developing a disorder associated with Spastin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        markers, to identify genetic disorders, as hybridisation probes or primers, as an antigen, identify and express recombinant protein for analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression or activity of (I). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin protein or spastin gene expression or activity. AAH20172 to AAH20173 represent specifically claimed primers which can be used in diagnostic methods from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; mouse; spastin; ARSACS; chromosome 13q11; identification; autosomal recessive spastic ataxia of Charlevoix-Saguenay; mutation; neurodegenerative disease; reduced sensory nerve conduction; diagnos reduced motor nerve velocity; hypermyelination of retinal nerve fibr atrophy of upper cerebellar vermis; absence of Purkinje cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The neurodegenerative disease comprises reduced sensory nerve conduction, reduced motor nerve velocity, hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of Purkinje cells and abnormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome
                                                                                                                                          New isolated polynucleotide, encoding spastin gene, and useful for diagnosing autosomal recessive spastic ataxia Charlevoix-Saguenay disease by detecting two point mutat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                09-AUG-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAH20149
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WO200129266-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Homo sapiens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay CC (ARSACS)) gene sequences (I). The spastin gene has been mapped to CC chromosome 13q11. (I) have neuroprotective activities and can be used in CC gene therapy and as a spastin polypeptide agonists. (I), their fragments CC or their complements can be useful for assaying the presence of a nucleic CC acid molecule in a sample. (I) is useful for diagnosing or aiding in the CC diagnosis of an early onset neurodegenerative disease in an individual. CC The neurodegenerative disease comprises reduced sensory nerve conduction, CC reduced motor nerve velocity, hypermyelination of retinal nerve fibres, CC atrophy of upper cerebellar vermis, absence of purkinje cells and CC abnormal neuronal lipid storage. (I) can also be used to produce CC antisense nucleic acids, is useful as molecular weight or chromosome CC markers, to identify genetic disorders, as hybridisation probes or CC primers, as an antigen, identify and express recombinant protein for CC analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from CC the present invention can be used to identify subjects having or at risk of for the corresponding a disorder associated with aborem terragasion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; mouse; spastin; ARSACS; chromosome 13q11; identification; autosomal recessive spastic ataxia of Charlevoix-Saguenay; mutation; neurodegenerative disease; reduced sensory nerve conduction; diagnosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        protein or spastin gene expression or activity. AAH20122 to AAH20173 represent specifically claimed primers which can be used in diagnostic methods from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                reduced motor nerve velocity; hypermyelination of retinal nerve fibre; atrophy of upper cerebellar vermis; absence of Purkinje cell;

The spastin gene has been mapped to chromosome 13q11. (I) have neuroprotective activities and can be used in gene therapy and as a spastin polypeptide agonists. (I), their fragments or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for diagnosing or aiding in the diagnosis of an early onset neurodegenerative disease in an individual. The neurodegenerative disease comprises reduced sensory nerve conduction, reduced motor nerve velocity, hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of purkinje cells and abnormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome markers, as an antigen, identify and express recombinant protein for a primers, as an antigen, identify and express recombinant protein for
                                                                                                                                                                                                                                                                Human; mouse; spastin; ARSACS; chromosome 13q11; identification; autosomal recessive spastic ataxia of Charlevoix-Saguenay; mutation; neurodegenerative disease; reduced sensory neconduction; diagnosis; reduced motor nerve velocity; hypermyelination of retinal nerve fibre; atrophy of upper cerebellar vermis; absence of Purkinje cell; absormal neuronal lipid storage; genetic disorder; characterisation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              of developing a disease or disorder associated with aberrant expression or activity of (I). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin protein or spastin gene expression or activity. AAH20122 to AAH20173 represent specifically claimed primers which can be used in diagnostic

The spastin gane has been mapped to chromosome 13q11. (I) have neuroprotective activities and can be used in CC chromosome 13q11. (I) have neuroprotective activities and can be used in CC gene therapy and as a spastin polypeptide agonists. (I), their fragments CC or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for diagnosing or aiding in the CC diagnosis of an early onset neurodegenerative disease in an individual. CC The neurodegenerative disease comprises reduced sensory nerve conduction, CC reduced motor nerve velocity, hypermyelination of retinal nerve fibres, CC atrophy of upper cerebellar vermis, absence of purkinje cells and CC abnormal neuronal lipid storage. (I) can also be used to produce CC antisense nucleic acids, is useful as molecular weight or chromosome CC markers, to identify genetic disorders, as hybridisation probes or CC analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from CC in represent invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression CC constitute of (I). The assays can be utilised to identify a subject CC methods from the process of developing a disease or disorder associated with Spastin constitute of the present invention or activity. AAH20123 to AAH20173 CC methods from the present invention or activity as be used in diagnostic constitutes of the present specifically claimed primers which can be used in diagnostic constitutes the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

CC acid molecule in a sample. (I) is useful for diagnosing or alding in the Cd diagnosis of an early onset neurodegenerative disease in an individual. CC The neurodegenerative disease comprises reduced sensory nerve conduction, CC reduced motor nerve velocity, hypermyelination of retinal nerve fibres, CC atrophy of upper cerebellar vermis, absence of Purkinje cells and CC abnormal neuronal lipid storage. (I) can also be used to produce antisease nucleic acids, is useful as molecular weight or chromosome. CC markers, to identify genetic disorders, as hybridisation probes or CC primers, as an antigen, identify and express recombinant protein for CC canalysis, characterisation or therapeutic use, or as markers for tissues CC in which the corresponding protein is expressed. Diagnostic methods from CC the present invention can be used to identify subjects having or at risk CC of developing a disorder associated with aberrant expression CC correction or sactivity of (I). The assays can be utilised to identify a subject CC having or at risk of developing a disorder associated with Spastin
                                                                                                                                                                                                                                                                                                                                                                                                                                           (ARSACS)) gene sequences (I). The spastin gene has been mapped to chromosome 13q11. (I) have neuroprotective activities and can be used in gene therapy and as a spastin polypeptide agonists. (I), their fragments or their complements can be useful for assaying the presence of a nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (UYMC-)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  23-MAR-2000;

The library is used to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and can detect colon, prostate, breast and lung cancer. The library can be used to produce probes for detection of mRNA and to produce additional copies of the polynucleotides. The probes can be used for chromosome mapping of the polynucleotides are the probes can be used for chromosome mapping of the polynucleotides are used as genetic or biochemical markers (e.g. in blood or tissues) that will detect the earliest changes along the carcinogenesis pathway and/or monitor the efficacy of therapies and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 preventive interventions. The polynucleotides, polypeptides and antibodies against them can be used in pharmaceutical compositions to treat the cancers and proliferative disorders such as neoplasia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Library of polynucleotides for diagnosing a cancerous state of mammalian cell and detecting cancer, particularly of the colon prostate, comprises 3351 human polynucleotide sequences -
New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Crkenjakov R, I

(II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and to produce other types of data and products dependent on D amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the specification, but was obtained in electronic format directly at the invention of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communication of the communic
Novel polynucleotides derived from Coryneform bacteria, for identifying intation point of a gene, measuring expression of a gene, analysing
                                                                                                                                                                                                                                                                                                                                                     Nakagawa S,
